

# Assessment of pollution load on river Ganga from Haridwar to Garhmukteshwar

By Prabhakar Shukla

GRIN Verlag GmbH Dez 2014, 2014. Taschenbuch. Book Condition: Neu. 210x148x1 mm. This item is printed on demand - Print on Demand Neuware - Scholarly Research paper from the year 2014 in the subject Environmental Sciences, grade: 8.5, , course: M.Tech, language: English, abstract: There were many schemes for pollution abatement of River Ganga. Ganga Action Plan (1 and 2) and thereafter NRCD and National Ganga River Basin Authority (NGBRA) launched by Government of India. But these plans focused only on big cities and did not take into account pollution generated in the entire stretch/catchment. In their efforts small cities, semi urban settlements, Industries and pollution from rural sector were not addressed. As a result program had limited success and the improvement in water quality of River Ganga was limited. The impact of human activity or a project on an environmental resource or eco-system may be considered insignificant when assessed in isolation, but may become significant when evaluated. This study aims at studying the assessment of assessment of pollution load on point source discharges in river Ganga catchment from Haridwar to Garhmukteshwar (160 km) based on field visits , satellite data supported with details from Survey of India topographical sheets,...

## Reviews

*This book is definitely not straightforward to get started on studying but extremely exciting to read. It is really simplistic but shocks in the 50 percent of the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.*

-- **Ally Reichel**

*This publication is amazing. It is definitely basic but shocks in the fifty percent of your publication. You wont feel monotony at anytime of your own time (that's what catalogues are for concerning if you question me).*
