Reviews

This published publication is fantastic. it had been writtern very perfectly and useful. Once you begin to read the book, it is extremely difficult to leave it before concluding.
(Junius Herman)

THE NEW WORLD OF QUANTUM CHEMISTRY: PROCEEDINGS OF THE SECOND INTERNATIONAL CONGRESS OF QUANTUM CHEMISTRY HELD AT NEW ORLEANS, U.S.A., APRIL 19-24, 1976

Springer, Netherlands, 2011. Paperback. Book Condition: New. 244 x 170 mm. Language: English . Brand New Book ***** Print on Demand *****.Bernard PULLMAN During a long period organic chemistry was one of the preferred field of exploration for many quantum chemists. It still remains of major interest for a number of them, but altogether it seems as if the center of gravity of the quantum molecular theories became displaced towards different horizons. The displacement seems in fact to occur in two directions. On the one hand, we see a prominent development of very refined computations for relatively small and frequently inorganic molecular systems with the view of a better and better reproduction of their observable properties and thus a better understanding of the fundamental principles governing the electronic structure of molecules. On the other hand, there is a no less prominent development of frequently also no less refined computations towards the study of molecular systems which because of their dimensions or the complexity of the questions which they raise go beyond the usual treatment of organic molecules. These later studies involve in particular the penetration of quantum-mechanical concepts and methods into the realm of biochemistry, biophysics, and pharmacology. It so happens that because of the nature of the problems involved this penetration has taken up a double aspect. Softcover reprint of the original 1st ed. 1976.
